

IT-22044 — Anik Malik

Program-1

```
class classObject {
```

```
    String name;
```

```
    int age;
```

```
    void display() { "My name is Anik";
```

```
    }
```

```
public class objectClass {
```

```
    (String[] args)
```

```
public static void main
```

```
class obj
```

```
classObject m1 = new classObject();
```

```
m1.name = 'Anik';
```

```
m1.age = 23;
```

```
m1.display();
```

```
}  
Output: Anik
```

## Program-2: Access Modifiers

```
class Person {
```

```
    private String name;
```

```
    public void setName(String newName) {
```

```
        name = newName;
```

```
    public String getName() {
```

```
        return name;
```

```
    }
```

```
}  
public class accessModifiers {
```

```
    public static void main(String[] args) {
```

```
        Person p = new Person();
```

```
        p.setName("Atif");
```

```
        System.out.println(p.getName());
```

```
    }
```

```
}
```

**Output:**

### Program 3: Inheritance and Protected Access

```
class Student {  
    protected String type = "A+1F";  
    void display() {  
        System.out.println("I am a student");  
    }  
}  
class Teacher extends Student {  
    void ungue() { System.out.println("I am a bank backbencher");  
    }  
}  
class Inheritance {  
    public static void main(String[] args) {  
        Teacher t = new Teacher();  
        t.display();  
        t.ungue();  
    }  
}
```

Output:

I am a student

## Program 4: Encapsulation

```
import java.util.*;

class BankAccount {
    private double balance;

    public void deposit(double amount)
    {
        if (amount > 0)
        {
            balance = balance + amount;
        }
    }

    public double getBalance() {
        return balance;
    }
}

public class Encapsulation {
    public static void main(String[] args)
    {
        Scanner sc = new Scanner(System.in);

        BankAccount acc = new BankAccount();

        System.out.print("Enter amount to deposit: ");
        double amount = sc.nextDouble();
```

```

acc.deposit(amount);
System.out.println("Current Balance: " +
    acc.getBalance());

```

**Output:**

```

Enter amount to deposit: 100
Current Balance: 100.0

```

Program-5: Abstract classes

```

abstract class Creature {
    abstract void makeSound();
    void run() {
        System.out.println("Running...");
    }
}

class Goat extends Creature {
    void makeSound() {
        System.out.println("Maaaaaaa...");
    }
}

```

```

public class AbstractClass {
    // ...
}

```

```

public static void main(String[] args) {
    Goat g = new Goat();
    g.makeSound();
    g.run();
}
}

```

**Output:**

Maaa--aaa  
Running.....

### Program 6: Interface

```

interface Animal {
    void sound();
}

class Cow implements Animal {
    public void sound() {
        System.out.println("Hambaa");
    }
}

public class InterfaceCode {
    public static void main(String[] args) {

```

```
Cow d = new Cow();
```

```
d.sound();
```

```
}
```

```
}
```

**Output:**

Hamba

### Program-7: Multiple Inheritance

```
interface Bankable {
```

```
    void bank();
```

```
}
```

```
interface playable {
```

```
    void play();
```

```
}
```

```
class Dog implements Bankable, playable {
```

```
    public void bank() {
```

```
        System.out.println("Dog is banking...");
```

```
    }
```

```
    public void play() {
```

```
        System.out.println("Shakib is playing...");
```

```
    }
```

3

```
public class multipleInterface {
    public static void main (String[] args) {
        Dog d = new Dog();
        d.bank();
        d.play();
    }
}
```

3

**Output:**

Dog is banking.....

Shakib is playing.....

### Program-8: ATM machine

```
import java.util.*;
```

```
public class ATM {
```

```
    private double balance = 10000.0;
```

```
    public void deposit (double amount) {
```

```
        if (amount > 0) {
```

```
            balance = balance + amount;
```

```

        System.out.println("Success");
        System.out.println("$" + amount);
    }
    else {
        System.out.println("Invalid amount! Please
        enter a positive number.");
    }
}

```

```

public void withdraw (double amount) {
    if (amount > 0) {
        if (amount <= balance) {
            balance = balance - amount;
        }
        else {
            System.out.println("Invalid amount!
            Please enter a positive number.");
        }
    }
}

```

```

}

public void checkBalance() {
    System.out.println("Current Balance:
    $" + balance);
}

```

```

public static void main (String[] args) {
    ATM atm = new ATM();
    Scanner sc = new Scanner();
    System.out.println ("Welcome to ATM Machine ");
    while (true) {
        System.out.println ("In 0 Please choose an option:");
        System.out.println ("1. Deposit");
        System.out.println ("2. Withdraw");
        System.out.println ("3. Check Balance");
        System.out.println ("4. Exit");
        System.out.print ("Your choice: ");
        int choice = sc.nextInt();
        switch (choice) {
            case 1:
                System.out.print ("Enter deposit amount: ");
                atm.deposit (sc.nextDouble());
                break;
            case 2:
                System.out.println ("Enter withdrawal
                balance: ");
                amount

```

```
        cr.nextDouble();
        atm.withdrawal();
        break;
```

case 3:

```
        atm.checkBalance();
        break;
```

case 4:

```
        System.out.println("Thank you for using  
        our ATM! Goodbye!");
```

```
        System.exit(0);
        break;
```

default:

```
        System.out.println("Invalid option. Please  
        try again.");
```

**Output:**

0 Please choose an option:

1. ~~With~~ Deposit

2. Withdraw

3. Check Balance

4. Exit

Your choice: 1

Enter deposit amount: 5000

Successfully deposited: \$5000.0

0 Please choose an option

1. Deposit

2. Withdraw

3. Check Balance

4. Exit

Your choice: 2

Enter withdrawal amount: 1000

Successfully withdrawn: \$1000.0

0 Please choose an option

1. Deposit

2. Withdraw

3. Check Balance

4. Exit

Your choice: 4

Thank you for using our ATM! Goodbye!

## Program-9: Calculator

```
import java.util.*;  
public class Calculator {  
    public void static main (String[] args) {  
        Scanner sc = new Scanner(System.in);  
        System.out.println("Enter the first number:");  
        double num1 = sc.nextDouble();  
        System.out.println("Enter the second number:");  
        double num2 = sc.nextDouble();  
        System.out.println("□ Choose an operation:");  
        System.out.println("+ Addition (+)");  
        System.out.println("- Subtraction (-)");  
        System.out.println("x Multiplication (*)");  
        System.out.println("÷ Division (/)");  
        System.out.println("Your choice: ");  
        char op = sc.next().charAt(0);  
        double result = 0;  
        boolean valid = true;
```

```
System.out.println("Calculating:.....");
```

```
switch(op){
```

```
case '+': result = num1 + num2; break;
```

```
case '-': result = num1 - num2; break;
```

```
case '*': result = num1 * num2; break;
```

```
case '/':
```

```
if (num2 != 0)
```

```
result = num1 / num2;
```

```
else {
```

```
System.out.println("X cannot divide by 0!");
```

```
valid = false;
```

```
}
```

```
break;
```

```
default:
```

```
System.out.println("Invalid operation selected
```

```
valid = false;
```

```
}
```

```

if (valid) {
    System.out.println("✓ Result: " + result + " ");
}
System.out.println("Thank you for using
the calculation!");
}

```

**Output:**

Enter the first number:

100

Enter the second number:

200

□ Choose an operation:

+ Addition (+)

- Subtraction (-)

x Multiplication (\*)

÷ Division (/)

Your choice:

\*

Calculating: .....

✓ Result: 20000.0

Thank you for using the calculation!
