Assignment : Exception handling using module and package

Name: Anik Mollik

ID : IT-22049

```
package exception;
public class InvalidException extends Exception{
public InvalidException (string message){

        super(message);
   }}

  package exception;
public class InvalidDepartmentException extends
                                    Exception{
public InvaledDepartmentException(string message)
  {     super(message) }}

package validation;
import exception.InvelidException;
import exception.InvalidDepartment Exception.
public class studentValidator{
public static void validateStudent (int age,
                                  string Department
```

```
throws InvalidExeception, InvalidDepartmentExeception

if (age>18) {

throw new InvalidExeception ("Age must
                    be above" +18).
}

if [department.equals] groomsCare ("ICT")) {

throw new InvalidDepartmentExeception (
                    "Dept must be ICT").

stystem.oul.printlln ("Student is valid!").

}
}
```

```
import java.util.Scanner;
import exception.InvalidException;
import exception.InvalidDepartmentException;
import validation.StudentValidator;
public class mainapp {
public static void main(String[] args)

Scanner sc = new Scanner(System.in);

try {
  System.out.print("Enter age : ");
  int age = sc.nextInt();

    sc.nextLine();
System.out.println("Enter department : ");
String department = sc.nextLine();
StudentValidator.validatestudent(age, department
}
```

```
catch (InvalidException i1 InvalidDepartment
                                    Exceptione)
{
system.out.println(" Valid Error: " + e.getmessage());

}
catch (exception e) {
system.out.println ("Unexeception error: "
                        + e.getmessage());
} finally { se.class() }

}}
```
