

Difference between abstract class and interface.

Abstract class	Interface
1) Can have both abstract and non-abstract methods	1) All methods are abstract by default (until Java 7).
2) Can have constructors.	2) Cannot have constructors.
3) Fields can be accessed by any access modifier.	3) Fields are public, static and final by default.
4) Can have instance variables.	4) Cannot have instance variables.
5) A class can extend only one abstract class.	5) A class can implement multiple interfaces.
6) Share a common base for a class.	6) Follow a common behaviour for a class.
7) Slower to achieve complete abstraction.	7) Fully abstract by default.
8) Uses extends keyword	8) Uses implements keyword
